It is a pleasure to introduce our NUGEL uPVC Doors & Windows employing modern technology. Our uPVC Doors & Windows are engineered with precise quality controls to give you the best in the world class.

We focus on our service, whether it is product/technical queries/installation advice, for any of these, our experienced staff are on hand to help you. World class quality & service are our key attributes.

TOUGH AND DURABLE:

uPVC is a very durable material used in water and sewer pipes since at least 100 years. Vinyl windows are so durable that the vast majority of them are installed over the past 25 years are still in use. Good quality uPVC Doors & Windows are tested for ultra violet resistance to ensure that they won't fade in the harsh sun. Rot resistant, uPVC Doors & Windows have a huge advantage over traditional doors & windows as they don't rot like wood, and are resistant to corrosion unlike metal.

LOW MAINTENANCE:

White or coloured uPVC window frames don't need painting or sealing. Significantly reducing maintenance over their life time. They are easily cleaned with water and detergent.

THERMAL COMFORT:

Unlike metals, uPVC is non-conductive, meaning its uses in windows frames does not transfer heat and therefore contribute to a more consistent internal temperature in the building. The combination of uPVC frames and double glazing make for high energy efficient windows.

RESISTANT TO SALT EROSION:

Our windows and doors are resistant to corrosion caused by salt-laden air making them sturdy for tropical climate and extreme temperatures.

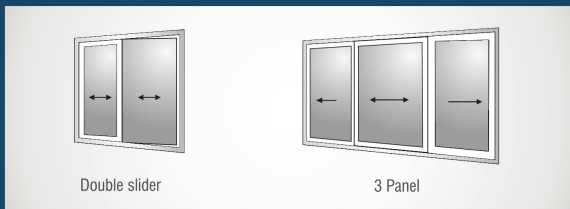

WHY uPVC?

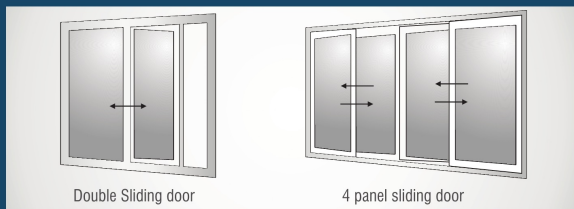

Product offerings for new buildings and replacement in homes, offices, commercial establishments and high rises.
